

YITING HU

🏠 [your-website.github.io](#) ✉ [your.email@domain.edu](#) 🐙 [your-github](#) **in** [your-linkedin](#) 🎓 [Google Scholar](#)
📍 Singapore / Hong Kong SAR / Guangzhou, China

RESEARCH INTERESTS

Machine learning, continual learning, machine unlearning, trustworthy AI, Internet of Things, cyber-physical systems, and data-driven decision making.

EDUCATION

Singapore University of Technology and Design (SUTD) Singapore
Ph.D. in Engineering Systems and Design 2023–Present

- Ph.D. candidate in the Engineering Systems and Design pillar.
- Research focus: trustworthy machine learning, continual learning, machine unlearning, and IoT-related intelligent systems.

Beihang University Beijing, China
M.Eng. in Electronic Information Engineering 2019–2022

- School of Electronics and Information Engineering
- Graduate training in electronic information engineering, signals, communications, and computational methods.

Beihang University Beijing, China
B.S. in Chemistry 2015–2019

- School of Chemistry
- Undergraduate training in chemistry with foundations in scientific experimentation and quantitative analysis.

PUBLICATIONS

ACCEPTED PAPERS

- [1] **Yiting Hu** and Lingjie Duan. “Theory of Continual Learning Against Data Poisoning Attacks”. In: *International Conference on Machine Learning (ICML)*. 2026. URL: <https://icml.cc/virtual/2026/poster/65304>.
- [2] **Yiting Hu**, Lingjie Duan, and Qian Zhang. “The Forgetting-Retention Dilemma: Certified Unlearning Theory in Continual Learning”. In: *International Conference on Machine Learning (ICML)*. 2026. URL: <https://icml.cc/virtual/2026/poster/60494>.
- [3] **Yiting Hu** and Lingjie Duan. “Truthful Mechanisms for Linear Bandit Games with Private Contexts”. In: *International Conference on Autonomous Agents and Multiagent Systems (AAMAS)*. 2025. arXiv: 2501.03865. URL: <https://arxiv.org/abs/2501.03865>.

MANUSCRIPTS UNDER REVIEW

- [4] **Yiting Hu** and Lingjie Duan. “Human-in-the-Loop Learning Through Communication Restriction”. Manuscript under review; earlier version: arXiv:2509.09574. 2026. arXiv: 2509.09574. URL: <https://arxiv.org/abs/2509.09574>.

- [5] **Yiting Hu** and Lingjie Duan. “Theory for Group-Robust Continual Learning”. Manuscript under review. 2026.
- [6] Fengjiao Li, **Yiting Hu**, and Lingjie Duan. “Regulating Human-in-the-Loop Learning for Dynamic LLMs”. Manuscript under review at MobiHoc 2026. 2026.

RESEARCH EXPERIENCE

Singapore University of Technology and Design (SUTD) Singapore
 Doctoral Researcher, Engineering Systems and Design 2023–Present

- Conduct research on machine learning methods for reliable, adaptive, and secure intelligent systems.
- Develop experimental pipelines and analysis for continual learning, machine unlearning, and learning under distribution shift or adversarial conditions.
- Collaborate across engineering systems, AI, and IoT-related research directions.

The Hong Kong University of Science and Technology (Guangzhou) Guangzhou, China
 Visiting Ph.D. Student, Information Hub, Internet of Things Thrust Jan. 2026–Present

- Visiting research in the Information Hub, Internet of Things Thrust.
- Work on IoT-related intelligent systems, data-driven modeling, and trustworthy machine learning for connected environments.
- Collaborate with faculty and students across interdisciplinary research projects.

Beihang University Beijing, China
 Graduate Research Student, School of Electronics and Information Engineering 2019–2022

- Completed graduate training in electronic information engineering, with foundations in signals, communications, computation, and intelligent systems.
- Built interdisciplinary preparation for research connecting electronic engineering, data analysis, and machine learning.

SELECTED PROJECTS

- Continual Learning and Machine Unlearning, *SUTD* 2023–Present
 - Study how models can adapt to new data while removing the influence of specified data or tasks.
 - Evaluate robustness, privacy, and performance trade-offs in sequential learning settings.
- Trustworthy AI for IoT and Cyber-Physical Systems, *HKUST(GZ)* 2026–Present
 - Explore data-driven approaches for reliable learning and decision making in connected, sensor-rich environments.
 - Investigate robustness and security issues in intelligent IoT systems.

TECHNICAL SKILLS

Programming: Python, MATLAB, $\LaTeX$, Git, Linux

Machine Learning: PyTorch, scikit-learn, experiment design, model evaluation

Research Areas: continual learning, machine unlearning, trustworthy AI, IoT systems

Engineering Background: electronic information engineering, signal processing, data analysis

Languages: Chinese (native), English (professional working proficiency)
